

The MPW is now available
for 3 and 6 Tetra packs

New

MPW-6

Tetra pack heater MPW

The MPW is suitable for heating 1 litre tetra packs of for instance milk, chocolate, soup and liquid sauces. The contents of the tetra packs is heated evenly in the dry warmer by means of a dry au bain marie system. This makes the MPW very hygienic, since it is not possible for water to drip on the counter when taking the pack from the heater. The contents of the tetra packs can be heated uniformly to a maximum of 80°C. A special grip is supplied to remove the pack from the heater, allowing the operator to serve directly from the pack.

MPW-3
