# Animo beverage and food containers

*Maintaining food and hot or cold beverages at correct, constant temperatures after preparation is essential for the preservation of flavour and quality. Animo manufactures an extensive range of beverage and food containers. Ideal for professional use in canteens, staff restaurants, hospitals, indoor and outdoor catering, food transport and on serving trolleys.*

## Containers type CNe and CNi

Animo containers are characterised by their user convenience and smart design and finish. They are made of CrNi 18/9 stainless steel and seamlessly welded. This makes them very hygienic and also easy to clean.

The containers are available in 5, 10 or 20 litre designs and come equipped with an integrated gauge glass, spare gauge glass and no-drip tap with click connection. Behind the aluminium protection cover you find a spare gauge glass and a gauge glass brush. The lid of the container is also insulated.

*The containers are available in two models: insulated (right) and electrically heated (middle and left) in 5, 10 and 20 litres. Containers of the same diameter are stackable!*

*The containers are also available without gauge glass.*

## Insulated or electrically heated

Animo offers two different beverage containers: an insulated version (CNi) and an electrically-heated version (CNe). The first version has a layer of polyurethane insulation and thus keeps both hot and cold drinks

at the ideal temperature. The insulated containers are suitable for dishwashers.

The electrically heated containers guarantee optimum temperature control of your hot drink, ensuring that the flavour remains

good and fresh. There is also little heat transfer; the container does not become hot on the outside!

With the brewing machines of the Animo ComBi-line, it is possible to brew coffee and tea directly in the container, retarding temperature and flavour loss. Animo offers a wide range of stainless steel serving trolleys to transport the containers. For further information about the possibilities, please do not hesitate to contact us. We shall be glad to help you!

## Options & accessories

For extra protection during transport you can also choose for an extra tap protection.

If you have to serve a large amount of coffee or tea in a short period of time, you can use the S-swivel arm or the special container tube with tap.

The insulated lid can be made even more secure by using a clip-on lid.

*Animo also supplies the accessories to brew coffee and tea directly in the containers.*

## Food containers type VC and MVC

The Animo food containers have been especially designed for the safe storage and transport of hot and cold food. Due to the optimum insulation, temperature loss is minimal. For the heavy duty containers type MVC, the temperature loss is only 2-3 degrees per hour. Animo food containers are the solution for institutional kitchens, hospitals, staff restaurants, caterers and the armed forces.

The double-walled, stackable containers type VC have a carrying handle and a tight-fitting insulated lid. They are available in 4, 6, 8 and 10 litre models. The containers are suitable for dishwashers.

For extra heavy duties, Animo has developed the food containers type MVC. These containers have a high insulating value and are suitable for use indoors and outdoors.

They are closed with strong sprung clamp fasteners and can be carried easily thanks to the hinged handles on the sides. Available in 5, 10, 15, 20, 30 and 40 litre models.

*The containers type MVC have been supplied to various army divisions and are provided with a NATO-stock number.*

*Insulated food containers MVC (left) and VC (right)*
